

RAM Software Named Certified ePCR Provider in Oklahoma

Slippery Rock, Pennsylvania – RAM Software Systems announced that it has been awarded certification as a third-party ePCR solution provider in Oklahoma.

In response to the National EMS information system (NEMSIS) requirements for data collection, the Oklahoma EMS Division has established a NEMSIS-compliant database, the Oklahoma EMS System, or OKEMSIS. RAM Software has worked with ImageTrend to provide the state's EMS community with an effective way to satisfy OKEMSIS reporting requirements, and also simplify and streamline data collection, so that large amounts of data can be quickly analyzed.

Certified EMS agencies are now eligible to use RAM Software's Ambulance Information Management (AIM) ePCR module to collect patient information and report this data to OKEMSIS. RAM Software AIM Billing customers can also directly link to their billing through AIM ePCR.

Jackie Wadley, owner of Wadley's Ambulance Service, stated, "Working with RAM Software has been a great experience. We are very satisfied with the products, services, and customer support that RAM provides. It is the most user-friendly software I have ever used. We can make changes on the fly and use it to fit our needs. RAM has worked very hard with the state to keep us in compliance. They've taken every step they can to make the transition as smooth as possible."

About AIM NEMSIS Gold ePCR

AIM NEMSIS Gold ePCR brings order to patient care data collection in the field and data analysis in the office. With clear and complete ePCRs, EMS providers can analyze runs individually and collectively for clinical, billing and quality assurance purposes.

About RAM Software Systems

Ram Software Systems (<http://www.ram-software.com/home.htm>) has been a leading provider of EMS software and services for over two decades. RAM Software's exclusive Ambulance Information Management (AIM) System is the only full suite of EMS software products and services that manage all aspects of ambulance companies—from dispatch to ePCR to billing, including crew, fleet, subscriptions and business intelligence (advanced reporting).
