

## **RAM Software Systems, Inc. Awarded Certified ePCR Provider Status in West Virginia**

**Slippery Rock, Pennsylvania** – RAM Software Systems has been granted West Virginia Vendor Certification status as a third-party ePCR solution provider by the West Virginia Office of Medical Services.

The EMS Performance Improvement Center (EMSPIC) located in Chapel Hill, North Carolina conducted the certification process for the State of West Virginia. RAM Software worked with EMSPIC and West Virginia officials to meet the state's ePCR vendor requirements for submitting data to the State EMS Data System. This information is collected by the West Virginia EMS Data System to promote and assure quality EMS service delivery, disaster management, personnel performance, and patient care for the entire state.

Certified EMS agencies are now eligible to use RAM Software's Ambulance Information Management (AIM) ePCR module to collect patient information and report this data to the State Trauma and Emergency Medical Information System (TEMIS). RAM Software AIM Billing customers can also directly link to their billing through AIM ePCR.

Scott Brown, System Administrator of the Logan Emergency Ambulance Service Authority, stated "The team at RAM Software has been flawless. I couldn't imagine going through the WV testing process with any other company."

"We constantly strive to make sure our products meet the data guidelines of our customers' states." Michael L. McIntyre, CEO of RAM Software, remarked. "It is exciting to be able to include West Virginia among the many other states we provide AIM NEMSIS Gold ePCR software to. It's a real privilege to be able to assist EMS field providers. WV State officials and Agency leaders did a phenomenal job of working with RAM to make sure our ePCR product would meet their needs."

### **About AIM NEMSIS Gold ePCR**

AIM NEMSIS Gold ePCR brings order to patient care data collection in the field and data analysis in the office. With clear and complete ePCRs, EMS providers can analyze runs individually and collectively for clinical, billing and quality assurance purposes.

### **About RAM Software Systems**

Ram Software Systems (<http://www.ram-software.com/home.htm>) has been a leading provider of EMS software and services for over two decades. RAM Software's exclusive Ambulance Information Management (AIM) System is the only full suite of EMS software products and services that manage all aspects of ambulance companies—from dispatch to ePCR to billing, including crew, fleet, subscriptions and business intelligence (advanced reporting).
